

„AIRPLUS1 LITUANICA” ENVIRONMENTAL MANAGEMENT POLICY

By coming to the market of physical-chemical methods usage that improves quality of the environment, we are eager to contribute to the Europe’s circular economy plan and use our innovative odours, like sulphur hydrogen, mercaptans and other pollutants elimination technology in various establishments.

While applying new technologies to eliminate odours and pollutants in the air or water „Airplus1 Lituania” commits to ensure high efficiency of products, safety of people and devices, therefore „Airplus1 Lituania” engages to act following these principles:

1. To set strict environmental management requirements and continually reduce negative impact on the environment, use natural resources rationally, apply new and alternative renewable resources;
2. Communicate with clients and give them comprehensive information about our equipment, its maintenance, security assurance;
3. Manage recycling, sorting, reusing, utilization processes of production waste;
4. Seek, that all vehicles would be environmentally friendly and would use renewable energy;
5. Continuously reduce the use of electricity in the devices while they are operating and so increase their durability;
6. Apply main principles of job safety in working environment and in objects. Maintain a working environment that meets EU requirements;
7. Constantly improve employees’ environmental knowledge.
