

“AIRPLUS1 LITUANICA” QUALITY MANAGEMENT POLICY

Main purpose of our work is to manufacture high efficiency ozone technology, which is able to safely and effectively remove odors and other pollutants in problematic areas. We seek to ensure the reliability of our equipment and the safety of people while it is operating. Also, we actively control the safety of our employees who manufacture and mount our devices. All equipment is tested – concentration of ozone, pressure and temperature is checked to make sure that it is stable, efficient and generates the right amount of zone.

While applying new technologies to eliminate odours and pollutants in the air or water „Airplus1 Lituanica“ commits to ensure high efficiency of products, safety of people and devices, therefore „Airplus1 Lituanica“ engages to act following these quality management principles:

1. Strictly comply to EU legal acts and standards of products and services quality;
2. Improve means and plans of communication with clients. Create mutually beneficial relations with clients and at the same time, make sure of their long-term success by getting to know their needs;
3. Seek and constantly supervise, that generated ozone concentration would not exceed hygiene standards in the premises where it is manufactured;
4. Strengthen systematic research and usage of the best prevention means and ensure credible risk control management;
5. Carry out continuous improvement and innovation, based on effective business processes, best practice and clients' inquiries;
6. Carry out our commitment about quality maintenance, expenses and work implementation terms;
7. Develop employees' competency, empowerment and accountability.
